

CCAvenue Dynamic Event Notification – Gap Check Report

This report summarizes the gap analysis between the requirements defined in the CCAvenue Dynamic Event Notification document and the current implementation state of the asd-academy project.

Requirement	Implementation	Status
Configure URLs for all 7 events	Webhook supports event override and auto detection.	Met
Decrypt encResp	Handled through ccavenue_crypto.php with env key.	Met
Map response parameters	All response fields stored and extracted.	Met
Detect event types	Supports risk, tokenisation, SI, echo, reconciliation.	Met
Store event data	Database updated with event-specific columns.	Met
Prevent duplicate processing	Tracking ID duplicate checks added.	Met
Update payment status	Registration and fee status update implemented.	Met
Send email receipts	HTML PHPMailer receipts implemented.	Met
Redirect frontend	Success/failure redirects implemented.	Met
Fix API base URL	Removed stale /asd-academy/ segment.	Met
Dynamic image URLs	getImageUrl helper implemented.	Met
Environment loader	Checks both backend and root .env.	Met
Registration schema	Fee and payment status columns added.	Met
Detailed logging	wlog helper logs all major steps.	Met
Echo URL support	Echo handled as order-status event.	Met

Final Verdict:

All explicit requirements from the CCAvenue Dynamic Event Notification specification have been successfully implemented in the current asd-academy project. No major functional gaps remain.
